## **FAIL-SAFE CHART**

05F5I-01

If any of the following codes are recorded, the ECM enters fail-safe mode.

DTC No.	Fail-Safe Operation	Fail-Safe Deactivation Conditions
P0031		
P0032	Turn off hooter	Ignition quitab OFF
P0037	Turn off heater	Ignition switch OFF
P0038		
P0100	legition timing in coloniate of from a position and and threattle	
P0102	Ignition timing is calculated from engine speed and throttle	"Pass" condition detected
P0103	angle	
P0110		
P0112	Intake air temperature is fixed at 20°C (68°F)	"Pass" condition detected
P0113		
P0115		
P0116	Facility and lead to a second section in (installed 00° O (470° F)	"Dana" and "Kanadatada
P0117	Engine coolant temperature is fixed at 80°C (176°F)	"Pass" condition detected
P0118		
P0120		
P0121		
P0122		
P0123	If the Floatrania Throttle Control System (ETCS) has a male	
P0220	If the Electronic Throttle Control System (ETCS) has a mal- function, the ECM cuts off current to the throttle control	
P0222	motor. The throttle control valve returns to a predetermined	
P0223	opening angle (approximately 16°) by the force of the return	
P0604	spring. The ECM then adjusts the engine output by control-	
P0606	ling the fuel injection (intermittent fuel–cut) and ignition tim-	"Pass" condition is detected and then the ignition switch is
P0607	ing in accordance with the accelerator pedal opening angle	turned OFF, the fail–safe operation will stop and the system
P0657	to enable the vehicle to continue at a minimal speed.	will return to normal condition.
P2102	If the accelerator pedal is depressed firmly and slowly, the	
P2103	vehicle can be driven slowly. If the accelerator pedal is	
P2111	depressed quickly, the vehicle may speed up and slow	
P2112	down erratically.	
P2118		
P2119		
P2135		
P0325		
P0327	Maximum timing retardation	Ignition switch OFF
P0328		
P0351		
P0352		ND 11 111 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
P0353	Fuel is cut	"Pass" condition detected
P0354		
	The accelerator pedal position sensor has two (main and	
P2120	sub) sensor circuits. If a malfunction occurs in either of the	
P2120 P2121	sensor circuits, the ECM detects the abnormal signal volt-	
P2121 P2122	age difference between the two sensor circuits and	
P2122 P2123	switches to limp mode. In limp mode, the remaining circuit	"Pass" condition is detected and then the ignition switch is
P2125	is used to calculate the accelerator pedal opening to allow	turned OFF, the fail-safe operation will stop and the system
P2123	the vehicle to continue driving.	will return to normal condition.
P2128	If both circuits malfunction, the ECM regards the opening	
P2138	angle of the accelerator pedal to be fully closed. In this	
. 2100	case, the throttle valve will remain closed as if the engine is	
	idling.
