DTC

P1129/89 ELECTRIC THROTTLE CONTROL SYSTEM **MALFUNCTION**

CIRCUIT DESCRIPTION

Electric Throttle Control System [ETCS] is composed of the throttle motor to operate the throttle valve, the throttle[position]sensor[to]detect[the]opening[angle]of[the]throttle[valve,]the]accelerator[pedal]position[sensor to@detect@he@acceleratorpedalposition,@heECM@o@ontrol@heETCS@and@he@oneValve@ype@hrottlepody. The ECM controls the throttle motor to make the throttle valve opening and le properly in the sponse to driving condition. The hrottle position sensor which is mounted on the hrottle body detects the opening angle of the the throttle valve, and the rovides deedback of the ECM of control the throttle of throttle of throttle of the throttle of function, []he[ECM[shuts[down[]he[]bower[]or[]he[]hrottle[]motor, []and[]he[]hrottle[]valve[]s[]ully[]closed[]by[]he return spring.
